

## Vote for Peter Stegmaier.

I am Assistant Professor of Knowledge, Governance and Transformation in the group 'Knowledge to Transformations in Society' (KiTeS) and have been working at UT since 2009. This means that for years I have been dealing with issues of research and innovation policy - the frameworks and political challenges that influence all our work at a university.

My main foci:

### 1. Enabling consistent research and education:

I want to help ensure that our faculty functions well in general, and that, at the same time, it also remains a biotope for experimentation in the Humboldtian sense – a place of intensive research and education first and foremost as an end in itself, but then also open to exchange and cooperation on that basis. All of this must be made structurally possible.

2. **Sustainable faculty:** Science needs staying power, it is not fast-food data processing. Today's science that wants to be sustainable requires a balanced consideration of the links between knowledge, cultural diversity, technology, ecology and economics. Where else but at such a diverse faculty can we develop and reflect on such integrative practical solutions? Let's not always ask the state, the university or the individual – let's start in our own organisation!

3. **Balancing of interests:** Our diverse faculty harbours enormous potential of various kinds. My aim is to support the faculty in keeping this diversity in a good balance of interests.

Peter has been member of the faculty council before, as well as chair and member of different examination boards and the BMS ethics committee, and offers to join provide his know-how again to represent staff in the challenging time ahead.
